

Fleet and Infrastructure Access Review

As part of a major evaluation of the accessibility of all transit modes in the Greater Vancouver, British Columbia, region, Nelson\Nygaard led a team of international experts in the assessment of fleet and facility accessibility, including the development of universal access guidelines and checklists that can be used for future procurements and facility improvements.

As an extension to a comprehensive analysis of the accessibility of the fleet and facilities of the greater Vancouver Transportation Authority, the Nelson\Nygaard team was asked to provide technical input to the design of the new light rail project linking downtown Vancouver to the airport.

Project Duration: 2005-2006

Total Budget: \$160,000
